OPERATIONAL OPTIMISATION DECISION SUPPORT

The challenge

FOR HOSPITALS AND THE ECOSYSTEM

Bed space and the ability to move people through it day by day, hour by hour, lie at the heart of quality care, performance targets and patients satisfaction.

In recent years the need for beds has risen as the number available has flatlined, bringing the problem to crisis points:

- Increase in bed blocking due to late social discharges
- Increase in trolley waits
- Increase in surgery cancelation due to bed unavailability
- Accident and Emergency services closed
- Delays in discharges due to poor communication and interoperability, to name a few.

Our solution

ENHANCES THE ABILITY OF HOSPITAL MANAGERS AND STAFF TO BEST ALLOCATE THE RIGHT PATIENT TO THE RIGHT BED, AT THE RIGHT TIME, ENSURING THE OPTIMUM COST, WITHIN A TIMEFRAME

Glantt's bed management solution provides real time suggestions of the optimal actions to be undertaken considering clinical data, patient flow, stochastic admissions, and the existing capacity of the hospital across the ecosystem.

It is built to support decisions that will optimise operations with impact in efficiency, service levels, quality of care and patient satisfaction.

With a real-time automated rationing simulator, it embeds each hospital bed management lessons learned and best practices.

INNOVATION PRODUCT
INTERCONNECT 2016
NEW FEATURES 2017

KEY BUSINESS BENEFITS DELIVERED BY GX

Seamless Integration

The new GX Integration module offers customization capabilities to meet business specific needs, allowing to integrate with a wide range of vendor solutions.

Lower Setup Costs

Having Glantt managing the IT infrastructure means lower IT costs for hardware, software and people needed to manage it all.

Access Anywhere

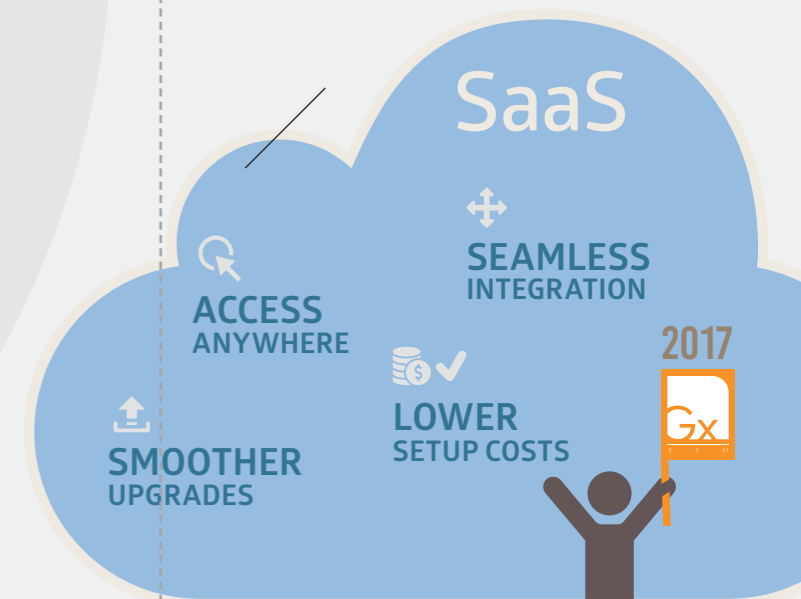

With the new GX SaaS approach, users are able to access their data and work more efficiently from anywhere.

Smooth upgrades

Because Glantt manages all updates and upgrades, there are no patches for customers to download or install.
